## News Notes

Lee Brewerton was a business visitor in Lethbridge on Thursday.

A light shower of rain fell on Monday night.

Roads to Magrath and west are in pretty good shape now.

Mrs. Percy Poulsen was a passenger on Wednesday's train to Magrath.

King Motors are doing some more painting in the interior of this garage.

R. S. Orgill took out a new Massey-Harris Rod Weeder this week.

If its printing. Let the Recorder do it.

Ross May of Magrath was here on Friday last week.

We had a beautiful shower Thursday.

John Wall and party were in attendance at the Temple on Tuesday this week.

C. L. Burnham of Cardston, came down Monday and is now working for J. D. Hall.

Athol Cooper who is teaching at Beaver, spent the Easter holidays in Raymond.

T. K. Roberts is riding around in a fine new Chevrolet Coach purchased this week from Rutt Motors.

Mrs. Williams and a crowd of girls were at the Alberta Temple on Tuesday for baptisms.

The deer in Waterton are now so tame they will eat out of a person's hand. They are very plentiful too.

Mr. and Mrs. S. I. May spent Easter with relatives and friends in Cardston.

Mr. Mitchell of the Economy Market is now driving a nice Pontiac Coupe.

J. E. Clark went to Spring Coulee on Thursday and brought his car home.

Gordon Brewerton, Cardston was a Raymond visitor Good Friday, Sunday and Monday.

A prairie fire was doing its stuff on the Blood Reserve north of Cardston Saturday and Sunday last.

J. E. Meeks and party were Cardston visitors last week. Mrs. Roxie Robins returned with them.

D. L. Gilbert of the A. C. Staff is now driving a shiny new Ford, recently purchased from King Motors.

Bills were printed this week for the Opening Dance at the new Magrath High School on May 2nd. Quite a few are going from here.

Bert Nilsson took up a carload of 2nd Ward Deacons to the Temple at Cardston on Tuesday for baptismal work.

The Sugar City Motors are mentioned every night now as Raymond Agents in the Nash broadcast from C.J.O.C. at Lethbridge.

The reduction of price on Plymouths make this car a interesting subject for prospective buyers. The Raymond Motors sell them.

The Official Opening of the Sugar City Motors will take place Saturday evening when a Supper and Dance will be held.

E. S. Duncan, owner of Crag and Canyon, Banff has purchased the printing plant of the Banff Mercury and now has a well equipped and up-to-date plant.

The Business Girls had a very successful and well attended dance here Monday evening when "Pete-Tempo Kings" of Shelby, dispensed the jazz for their "Rainbow Ball."

## Undeclared Intermediate Champions Jury Reports

Standing right to left—Red Kirkham, f. D. O'Brien, f. J. Kenney, c. W. Fairbanks, c. Sitting—J. Strong, g. Paul Dahl, Manager and Coach; K. Hague, g. Bottom, P. Hawkins, g. The "Idlers" played through the 1930 season without a defeat, winning 31 games with an average score of 56 points per game against an average of 33 scored by opposing teams.

Through constant work and regular practice the "Idlers" developed a well balanced team of basketball stars. Every man fast in team play, and accurate in basket shooting. Realizing the value of team work as a factor in winning the game.

Kenney, Kirkham, O'Brien and Fairbanks furnished a centre and forward line that was unbeatable, and are a

quartette of basket better, while Hague, Hawkins and Strong besides settling up a stonewall defense, could always get into the play and manage to sink a few baskets.

With the players, Paul Dahl as manager, is certainly deserving of praise for his untiring labors as coach of the boys. Watch the "Idlers" another year.

The coroner's jury inquiring into the causes of death of little Mary Lou Anderson, met Monday night and after hearing the evidence of a number of witnesses, returned a verdict to the effect that in their opinion death was due to phosphorous poisoning, and everyone was absolved from any blame.

The report from Edmonton on the analysis of the lungs and other parts of the stomach showed no signs of poisoning, but it was pointed out in the investigation that phosphorous acts more on the nerves, and therefore, a post mortem analysis would not necessarily reveal any trace of phosphorous.

## Red Cross

Celebrating the League of Nations day on April 22nd, one thinks with gratitude of the tremendous impetus given to the world's health and happiness by the Article xxv of the Treaty of Paris, (1918) in which the Red Cross Society is given its mandate to "carry on".

The three aims "The improvement of health, the mitigation of suffering and the prevention of disease" are fundamental to the welfare of every man, woman and child in this country.

The people of Canada, hardy of race, rich in heritage have a stupendous task ahead of them in interpreting the above policy.

In every province the Red Cross has its group of workers who are constantly in touch with health problems whether it be that of the ex-soldier or the distant settler, or the day-old baby born in an out-patient hospital or the little crippled child.

Alberta Red Cross is still marching "breast forward," and in spite of financial difficulties which sometimes appear well nigh insurmountable, the Red Cross workers have faith that the flag of Red Cross will ever fly over the little country schoolhouse, where Juniors are maintaining health traditions worthy of their great Society and that the underprivileged child will ever find a home of healing in the Children's Hospital in Calgary and Edmonton.

## MANY NEW FEATURES ON FORDSON TRACTORS

Quick starting, more power and better cooling are features of the improved Fordson tractor which promise to make it more popular than ever as an agricultural and industrial unit, according to L. D. King, local Fordson dealer.

"The engine power has been increased 27 1/2 per cent," said Mr. King yesterday. "This has been accomplished by increasing the size of the cylinder bore, using a high compression head and improving the fuel and ignition systems."

"This result has been an increase to 30 brake horsepower at 1100 revolutions a minute, the recommended engine speed, or 3.2 miles per hour plowing speed. Correct mixture of air and fuel at all speeds is provided in the gas system by a newly developed carburetor. A new hotpot manifold insures proper vaporization of the gases before they enter the combustion chamber of the engine. Smoother operation and greater fuel economy have been obtained through these changes. The cooling system has been improved by the installation of a centrifugal pump. It is located inside the connection between the cylinder head and the top of the radiator and operates on the same shaft with the fan."

"The ignition system has been improved by replacing the flywheel magneto with a high tension magneto, equipped with an impulse starter coupling. This type magneto makes it unnecessary to spin the engine for starting as sufficient spark is obtained by simply turning over the engine slowly even in the coldest weather."

"The air cleaner has been enlarged to give more satisfactory operation. The water capacity has been increased from seven to fourteen quarts which makes refilling much less frequent."

## Fascinating Links in Canada's History

Ottawa Ontario, April, 23 (Special to the Recorder) Yards and yards of rope in a coil are one of the interesting things noted in the Canadian Room at the Dominion Archives and it has an interesting recent history attached to it. The rope was presented to Dr. Doughty in May, 1926 by H. F. Lambert, deputy leader of the Mount Logan expedition which took place in 1925. The accompanying letter reads:

"This rope is one of two used on the ascent of Mr. Logan Canada's highest mountain. It was used almost continuously while actually on the ascent of the Logan massif from June 3rd to June 28th 1925."

Its very clean appearance is due to the fact that at no time during this period did it come in contact with rock or soil, Logan being a snow and ice climb.

At the higher altitudes the temperatures recorded were invariably below zero and on the night of the 18 and 19th of June a minimum of 33 degrees below zero Fahrenheit was recorded.

This rope was on the summit of Mt Logan at 8 p.m. June 23rd, an altitude of 19,850 feet. On July 2nd it was abandoned at "Turn" cache at the junction of the Logan and Ogilvie glaciers.

It was recovered February 1926 by A. M. Taylor, a member of the climbing party who made the journey of 123 miles into "Turn" from McCarthy by dog sled, having in view the salvaging of much equipment left behind at this point.

## Home-coming Social

The Home coming Social in honor of Elders Bryon Vance and Blackmore, will be held in the High School Auditorium tonight, (Friday.) A program and dance will occupy the time of the evening.

## HEADACHES

Pain is not a disease. It is generally a signal that something is wrong, that some condition requires attention. Headache is a common symptom and occurs in almost every illness. It is a warning, in many cases, that there is some poisoning going on somewhere in the body, poisoning, such as comes from the activity of the germs of disease or as a result of the failure of the body to rid itself of the wastes of body activity.

Eyestrain is a common cause of headache. It is not that the individual is unable to see, but rather that on account of some abnormal condition of the eye, or over-use of the eyes, a strain is thrown upon them, and headache frequently results.

Overindulgence in food, beverages, or tobacco, living in unventilated rooms, emotional upsets, uterine disease, and many other conditions can be placed on the list of causes of headache.

It is not suggested that it is necessary or advisable to call the doctor for every headache. The cause of the headache may be very plain to the sufferer, and he knows that the cure, and prevention of other headaches depend upon his avoiding the excess of indiscretion which is the cause.

Frequent headaches, unusually severe headaches, are not to be disregarded. It is a mistake to relieve the headache by drugs and to go on feeling that all is well. Of course, relief from pain is desired, but to secure release from headaches and then disregard them is about as sensible a procedure as to blow out a red lamp which acts as a danger signal, and go ahead as if the danger itself had been removed.

Headaches are a signal. Their causes should be sought for and, when found, treatment directed towards the cause, not the symptom. Nature has arranged that we be given warnings of impending or actual disease in many conditions. There are various types of headaches and their location, their severity and their time of occurrence all have a meaning which help in determining the underlying cause which must be dealt with, not only to prevent the recurrence of headaches, but to correct diseased conditions and to secure a normal, healthy existence.

## POSSIBILITIES OF SUGAR PRODUCTION IN ALBERTA

The formation of the Bow Valley Sugar Beet Grower's Association and the activities of this organization have attracted widespread interest throughout this section of Alberta, and caused much speculation as to the possibilities of the beet sugar industry and what importance it would have in the agricultural development of the country. The following information is published for the benefit of those interested in the industry. The information was obtained from the office of the Alberta Trade Commissioner in Edmonton, and has been verified by persons well acquainted with the industry.

The annual consumption of sugar as sugar in Alberta is 54,000,000 lbs. This does not include sugar consumption in imported candies, biscuits, extracts, etc.

Alberta's sugar production in 1929 was 17,600,000.

Alberta's possible production in 1930 is estimated at 24,000,000 lbs.

It would require the operation of two additional factory units of the same size as the Raymond factory to produce the entire consumption of Alberta. This production would call for the efforts of 1,800 farmers on 30,000 acres of irrigated land with a production of 8 tons to the acre.

There would be approximately 4,000 workers concerned with the growing, thinning, harvesting and hauling of these beets. About one-half of these people would be concerned with team or trucking operations, the other half with the hand labor of hoeing, topping, loading, etc.

There would be a force of about nine hundred people employed during the period of factory operations for ninety days each year, commencing October 1st, and lasting during the slack period of the fall until January

10. There would be a permanent force of employees of approximately 120. There would be an additional capital investment in the province of around \$3,000,000. The monetary value of the raw beets would range from \$1,680,000 up to \$2,000,000 per year depending upon the market price for sugar. The retail value of the sugar at 6 cents per pound would be approximately \$3,400,000.

The production of beets on this scale would provide 30,000 acres of absolutely clean land, better than summerfallow, for the production of grain or other crops the following year. 30,000 acres of beet tops would provide at least \$100,000 worth of fall pasture for dairy cattle or for fattening sheep or beef cattle. An acre of beet tops will carry fifty head of lambs or five head of cattle for two months in the fall.

There will be 50,000 tons of wet pulp produced which would be sufficient to fatten 40,000 lambs or 6,000 head of cattle, together with other rations or to provide a dairy ration for 10,000 head of dairy cows.

There would also be a production of 12,000 tons of beet pulp, which fed at the rate of three lbs. per day to dairy cows, would provide sufficient ration for the winter period to feed 45,000 head of dairy cows, or to fatten 30,000 head of cattle, or 200,000 head of lambs or sheep. Basement Mail.

Which First,

"Above all," said the mistress to the new maid, "I want obedience and truthfulness."

"Yes, madam," replied the girl. "And if anybody calls when you are in, and you say you are out, which shall come first—obedience or truthfulness?"

The Churchman

TO PARK—TWIST LEVER, SIDE WHEELS DROP, SLIDE OVER

PASADENA, Calif.—The great national question of "Where shall I park?" may be answered by the invention of a Pasadena man, George W. Woolley. Mr. Woolley, who has worked on the device for three and a half years, has received notification of the allowance for application of patent through the United States Patent Office, covered by 21 claims.

The device, by means of auxiliary wheels which, when not in use, fold up out of sight beneath the body of the car, permits the driver to move the car sideways to right or left by a gear shift lever, the power required being furnished by the idling horsepower of the motor. In operation, it raises the car 4 1/2 inches from the ground, and then at the desire of the operator moves the car to the right or left.

According to Mr. Woolley, only one inch of clearance space between the cars is actually needed for parking with this device, whereas space needed for entering and leaving street curbs under present equipment wastes 32 1/2 per cent of the footage.

Operation processes as explained by the inventor are as follows: First movement of gear lever lifts the car; second movement moves it to right or left; third, lowers car to its original or regular traveling wheels.

The device can be installed on any gear-shift car and is able to lift cars weighing up to 8000 pounds, Mr. Woolley stated—Christian Science Monitor

### PROSPECTS EXCELLENT

Judging from present prospects this should be a great year for Raymond and district. The soil is in excellent condition and generally speaking only the best seed is being used. Moisture conditions so far could hardly be better. It may look a bit dry on top, but as soon as the surface is moved the soil is moist and teeming with life.

There has been a large acreage of wheat already seeded and germination is splendid. Coarse grain acreage is also larger this year and generally on better prepared soil.

The best acreage is well up to the 15,500 acre goal, and the field men are now concentrating on the seeding of only well prepared land. The drill are running steadily and thousands never will be needed by the end of the week. The idea of seeding beets on only good land will have a double advantage. It will mean a heavier average tonnage per acre, and also more satisfied beet growers which will argue well for the future of the beet industry.

All these things point to a better program of mixed farming than ever before and prosperity will naturally follow.

The success obtained last year by those who went into the fattening game has given an impetus to others and this year should see the business more generally established. Of course those who had hinds this year may with disappointment, but this does not appear to be permanent; and those who had hogs and cattle made good money, despite the fact that it was the first year for a great many.

After visiting a number of farms at various points in the country, we are more than ever convinced that all we need for stabilization, contentment and financial independence is a good sensible program of diversified farming. The labor will not be so arduous, the life will be more interesting, and the risks will only be about 1-3 what they are in grain farming, while the returns will be about twice as great.

Take stock of those who are farming this way and see if we are right.

### RUSSIA'S WHEAT AMBITIONS

London—Is Soviet Russia seeking to swamp the wheat markets of the world by enormous over-production during the next five years?

This is what grain growers in Europe ask themselves since they have feared of the five-year development plan for agriculture now in course of enforcement among Russia's hundred million peasant farmers.

The plan calls for a profound change in the whole system and method of Russian agriculture. It involves the disappearance of individual farming in grain, by decree of the all-powerful Communist rulers of the country, and its replacement by "collectives" or "collective farms" in which everyone will work for the state. The object of the change, which has aroused violent opposition among the conservatively minded peasantry, is to apply ruthless industrialism to farming. Grain is to be grown by mass production—just as if it was something turned out by a highly equipped modern factory.

To this end the vast plains of Russia have been given over to bands of Communist crusaders who are aiming not only at "collectivizing" the farms by propaganda or even at a pinch by terrorism but also at inducing the peasants to adopt the best up-to-date machinery for increasing output. Exchange of grain for fresh seed supplied by the department of agriculture is one of their main activities.

Soviet statisticians claim that already they have released from their storehouses 140,000,000 bushels of spring wheat for sowing in regions where last year little grain was grown. They say that an enormous additional acreage will be laid down in the course of the next few months.

Another feature of their plan is to convert their most fertile districts—the north Caucasus, the Crimea, the Ukraine and the Volga River valley—into areas growing only the highest grade of wheat. This is for the export market. It must not be sold in Russian and the purpose in view is openly declared to be that of giving battle to the supremacy of Canadian wheat in Britain and in Western Europe.

What are the chances of success for such a grandiose scheme?

Doubtless its promoters have visions of the wheat markets of the world overwhelmed with surpluses that will send prices down like the shares in a stock market collapse. But it is—especially in Russia—one thing to make great plans and another to carry them out. Centuries of backwardness, apathy and dislike of new methods have made their mark on the peasant and he is not to be modernized in a day.

Russia, at times is a country of vast crop fluctuations. Sometimes she has grave famines; sometimes considerable over-production. Then her roads and railways are few and rather archaic means of getting her wheat to market. Generally, even in the most favorable times, her grain producing areas expand very slowly and figures for recent years show small indication of any acceleration.

There is also, the possibility of political disturbances. The movement for socializing the farms may fail. Collectivism as applied to men who have been their own landlords for more than a decade is not a doctrine easily learned, nor is it likely to be readily accepted.

Men, who, after the revolution found themselves free to do what they wished with the land they had seized are not over-ready to give up that freedom without a fight. And the weapon may be one that they successfully used before—to produce only enough for their own needs.

A revolt of this kind would upset all the Soviets' plans for the intensification of wheat growing. Meanwhile, however, there is undoubtedly some anxiety among German and Polish grain growers at the prospect of invading their markets. Calves of a formidable competitor some day.

If new bridges and larger culverts near anything, the Provincial Government are planning on bringing the first grade up to standard between Lethbridge and Cardston this summer. We hope so.

### CANADA IMPORTED 16,000,000 TONS OF COAL IN 1929

Ottawa, April 24 (Special to the Recorder)—The United States provided the bulk of Canada's imports of bituminous coal in 1929 with 13,593,192 tons of the total of 13,707,547 tons, the remainder having been supplied by the United Kingdom 114,044 tons; Newfoundland, 76 tons; and Alaska, 21 tons. Bituminous imports during the preceding years were 14,065,142 tons in 1927 and 12,761,487 tons in 1928.

Canadian imports of coal anthracite and bituminous, during 1929, showed an increase over the previous year. In 1929 Canada imported 4,019,917 tons of anthracite coal from the following countries: United States, 3,172,942 tons; United Kingdom, 729,458 tons; Russia, 117,404 tons; Japan 112 tons. Total imports of anthracite in the two previous years were 4,107,854 tons in 1929 and 3,748,816 tons in 1928.

### Sleuthing by Radio

(Photos by Courtesy Northern Electric Company Limited.)

Detroit police radio equipped cars made 1,193 arrests in 1928. In September last year they made 175 such arrests in an average time of 61 seconds each. These arrests ranged from bank hold-ups to kidnapping and from petty crimes to murder. Fifty specially equipped Ford phaetons patrol the entire city day and night under the direct control of police radio system headquarters.

Above, left to right, the headquarters, note the microphone through which the operator transmits to all cars, particulars of crimes as received. Typical downtown scene through which police cars operate.

Below, the police radio headquarters. One of the radio equipped patrol cars, note receiving set at the back of front seat.

DID YOU EVER STOP TO THINK

(Edson R. Waite),  
EDWIN S. FRIENDLY, BUSINESS  
MANAGER OF THE NEW YORK  
SUN, SAYS:

THAT some of the world's foremost idealists have long discussed and encouraged a democracy of the political systems of the nations of the world, but this ideal, however desirable its exponents characterize its advantages, is still remote and yet to be achieved. On the other hand, a democracy of international trade, with its immeasurable benefits, has already stamped its immense worth upon the people of all countries and thus became a commonplace which won its acceptance through the natural laws of supply and demand. The barrier of international trade has been made possible because of modern facilities of rapid transportation. But there was another necessary link to complete this world exchange of commodities, and this final connecting link is advertising. Advertising has presented commodities from distant lands in such a desirable manner to the people of the United States that they have purchased them in sufficient quantities to warrant a continuance of supply. And now that advertising has introduced and familiarized their advantages and created a constant demand for various products from far away lands, we buy and use them with scarcely an afterthought of the romance and the strange atmosphere which surrounds them.

Raw products, in some instances, which are necessary ingredients to complete certain commodities have through the means of generous advertising now become household and personal necessities all over the country. For example, we accept angora wool and spices from the Fiji Islands and from Madagascar, off the coast of East Africa, comes rubber and grapefruit. Portuguese Guiana sends us ivory and wax. Tripoli, which was one of the Barbary States and is now a Turkish regency, ships us saffron and fenna, and some of our best pottery

and glassware comes from Spain. B. I. gum sends us laces and linens. Peru sends cocoa, wood dyes and a trade of soda, and from the Argentine comes indigo, salts and sulphur. Some of our amber, sandalwood and letel is brought from Hongkong. The West Indies send sugar, pitch and arrowroot, and seal-skins, oil and lobsters come from Labrador. Some of our Manila cigars, filigree jewelry and earthenware are shipped from the Philippines. Alaska, which we purchased from Russia for \$7,200,000 and now worth many times the price, sends us furs, walrus ivory tin and gypsum.

WE MAY NOT READILY RECOGNIZE ALL OF THESE THINGS, NEVERTHELESS THEY FORM NECESSARY PARTS TO THE MANY PRODUCTS WHICH WE USE AND HAVE IN OUR HOMES. ADVERTISING IS THE WORLD'S PREEMINENT DISTRIBUTOR AND H. G. WELLS, ONE OF THE LEADING ADVOCATES OF THE WORLD DEMOCRACY, HAS RECENTLY SAID THAT "ONLY AN ADEQUATE ADVERTISING CAMPAIGN IS NEEDED TO ACHIEVE THE MILLENNIUM." SOME WILL QUESTION THIS, BUT FEW WILL DOUBT THE OLD MAXIM THAT "IT PAYS TO ADVERTISE."

**LARGE SCALE PRODUCTION AND LIVESTOCK**

There is pretty good evidence that large scale production of wheat, possible on the plains of Southern Alberta, is going to increase rather than decrease. New machinery, and the winning down of land values from 1919 to 1922 over the prairie belt has made large scale production possible. With this should come lower costs per bushel of raising wheat, thus putting us in better position to meet growing world competition.

But it is just a question whether this new phase of wheat production is going to be properly balanced, or whether we are going to plunge again into a one-crop orgy which will dislocate agricultural economies once more. During the dry period a few years ago we thought we had learned some much needed lessons. The farmer in the so-called dry area who depended wholly on wheat was found to be in a most vulnerable position when dry years came, and it was pretty well accepted that he should carry enough livestock to give him some assurance of an income that would tide him over. There is a tendency, with farms growing in size, to forget about this. But in our opinion it is more needed today than formerly because, while we are going into larger and more efficient machinery, we are also putting ourselves in a position where we must have more cash to run a farm. Horses would do a lot of work at cheap pasture. Tractors must have expensive gasoline and oils on which to operate. That means cash a day-day outlay which must be provided for. We may save considerable in labor costs but we cannot overlook the fact that tractor farming, while more efficient, requires a better line of credit during the growing season.

How can this be provided? It appears to us that the efficient farmer in the grain belt will do well to figure out some scheme of carrying a proper balance of livestock. Sheep, cattle, hogs or what you will—there is going to be a real need of providing an income from livestock to make up the growing daily outlay for the operation of the machinery on the larger wheat farm. We know that there is a very strong opposition on the part of the wheat farmer, especially if he is operating on a large scale to bothering about livestock. But the old rule still holds: "The bigger they are, the harder

**The Massey-Harris one-way disc Wheatland Plow proved itself when demonstrated**

THE 24 INCH DISC, spaced 10 inches apart, did it.

THE MASSEY-HARRIS will cut shallow or deep and cut a clean furrow.

THE MASSEY-HARRIS could not be choked under wet conditions. THE MASSEY-HARRIS has no side draft. May hitch to swinging drawbar and pull from center of tractor.

THE MASSEY-HARRIS POWER LIFT received very favorable comment.

**The New Plymouth**

The new Plymouth provides the kind of motor car that tens of thousands of Canadian motorists have long desired.

The body designs introduce an absolutely new style, grace and distinction. They provide ample room for five adult passengers—more room than any car in this field has ever attempted before. The fine upholstery is fitted and carved to provide comfortable and restful riding.

The attractive new slender-profile radiator and the bowl-type headlamps, are finished in the costly chromium plating process which gives a permanent lustre.

AND MANY OTHER IMPORTANT IMPROVEMENTS

or they fail" Exclusive wheat farming is a precarious occupation at best, and right now, with sagging markets it is more precarious than ever. When we realize that this country is equipped by nature to be one of the greatest livestock countries lying out of doors the wonder is that so many refuse to give livestock any place in the farming program. If we continue to fly in the face of Nature in this way we can only expect to take the consequences. —Lethbridge Herald.

Mrs. Tellit—Cousin Dorothy, you know, always wanted to have a little baby daughter so she could name her June.

Mrs. Askit—Yes. Did she do it?

Mrs. Tellit—No. The man she married was named Bugg, and it wouldn't do, you see. —Selected.

#### Here and There

(512)  
"As a political creed communism is practically discredited in China to-day," said Colonel G. W. Birks, in charge of Y. M. C. A. work in the Far East, interviewed as he passed through Winnipeg recently en route to Montreal after a six-months stay in the Orient. Colonel Birks thought that China would shortly split into independent parts, North and South China.

Seeding has become general in some Saskatchewan points and in many farming centres of Alberta, and is expected to be general shortly if favorable weather conditions continue, according to reports coming in to the Winnipeg offices of the agricultural department of the Canadian Pacific Railway.

Seventy head of finest thoroughbred stock arrived at Saint John recently to go forward by Canadian Pacific Railway to the Prince of Wales ranch at High River, Alberta. It is the first shipment of the kind to the ranch in the past four years. The majority are pedigree shorthorn cattle.

"There is at present in Great Britain a decided awakening of interest in the Canadian universities," said Dr. Cyril Norwood, headmaster of Harrow, one of the most famous of English public schools and Alma Mater of Lord Byron. Dr. Norwood is chairman of the delegation of British headmasters here on a tour of inspection of ten Canadian universities. He arrived at Saint John recently aboard S.S. Duchess of Bedford.

Canada's first ranking tennis star, Dr. Jack Wright, figures lion shooting, elephant baiting and antelope hunting is just the kind of sport to keep a tennis player in trim. Arriving at Vancouver recently aboard S.S. Empress of Canada, Dr. Wright says he feels in great shape for the forthcoming Davis Cup matches.

Retirement of C. E. McPherson, assistant passenger traffic manager Western Lines, Canadian Pacific Railway, after more than 50 years of railway service, and promotion of six other officials of the department from coast to coast of Canada, has been announced, effective May 1. Promotions are: H. W. Brodie to be overseas passenger manager; R. G. McNeillie to be assistant passenger traffic manager, eastern lines, Montreal; H. R. DesBrisay to be assistant passenger traffic manager, western lines, Winnipeg; E. F. L. Sturdee, general passenger agent, Vancouver; H. R. Mathewson, general passenger agent, Winnipeg; and George H. Carier, assistant general passenger agent, Montreal.

The annual production of honey in Canada is about thirty million pounds. While a great deal of honey is used in the home, the principal commercial users are confectioners, bakers and bottlers.

At the World's Poultry Congress to be held at the Crystal Palace near London in July, a feature of the Canadian exhibit will be a model of the Prince of Wales' ranch at High River, Alberta. It will occupy 100 square feet of space and will be fitted with electric appliances and lighting that will show the ranch in a novel and attractive way.

#### TO PRESERVE THE NATURAL BEAUTY OF NATIONAL PARKS OF DOMINION

Ottawa April 24; (Special to the Recorder)—Hon. C. Stewart, Minister of the Interior, will shortly bring before Parliament a bill the main purpose of which is to prevent the exploitation by private interests of the power, timber and mineral riches of our great national parks.

According to existing laws the leaders of the Government in power here have the right to dispose by order-in-council of any or all water power, timber or mineral resources within the boundaries of our national parks. Under Mr. Stewart's bill it will be necessary for a private bill to pass the House before any lease or other rights for commercial development can be granted.

This bill will receive the support of the House irrespective of party affiliations. It will be supported because its purpose is to protect the interests of the whole population of the country and to have any claim for expropriation thoroughly aired by debate in Parliament before it is granted.

There might be a rare occasion when it would be in the general interest to permit private development of power, mines or timber within the parks area and this bill would allow for such a contingency, but it would make impossible the ruthless exploitation for immediate gain of any portion of a great national asset.

These parks are the country's playgrounds and their scenic and other attractions are a source of huge revenue to the Dominion. The parks branch recognizing these facts, has all along followed the policy of keeping them inviolate. It will not permit mining or lumbering or the development of water power within them, and it has refused to accept park lands from any province with strings attached permitting exploitation. Evidently strong pressure has been brought to bear to overcome this stand. If this bill passes the onus will be with the public and it is most unlikely that public sentiment will favor anything in the nature of exploitation.

The dream of many far-seeing Canadians is the establishment of the great Trans Canada Highway from coast to coast bordered at intervals by wonderful national parks in every province. Through this great shop window it is hoped that twice the number of tourists now coming to the Dominion will view unspoiled natural advantages enjoyed by no other country in the world.

#### MOTHER SHIPTON'S PROPHECY

First published in 1488; republished in 1611. It will be noticed that, except the last two lines, her prophecy has been fulfilled to the letter and the rest remains to be seen.

Carriages without horses shall go,  
And accidents fill the world with woe.  
Around the world thoughts shall fly  
In the twinkling of an eye.

Later yet shall wonders do,  
Now strange, yet shall be true.  
The world upside down shall be  
And gold be found at root of tree.

Through hills men shall ride  
And no horse or ass be at his side.  
Under water men shall walk.  
Shall ride, shall sleep, shall talk.

In white, in black, in green,  
In the air men shall be seen  
Iron in water shall float  
As easy as a wooden boat.

Gold shall be found  
In a land that's not now known.  
Fire and water shall wonders do,  
England shall at last admit a Jew.  
The world shall get rich and dirty  
And come to an end in Nineteen  
Thirty.

—Free Press Prairie Farmer.

#### Steppe by Steppe

A Russian was being led off to execution by a squad of Bolshevik soldiers one rainy morning.

"What brutes you Bolsheviks are," grumbled the doomed one, "to march me through a rain like this."

"How about us?" retorted one of the squad. "We have to march back."

#### Reasonable Doubt

The jury had acquitted the defendant of horse-stealing because of the powerful plea of his lawyer.

"Honor bright, now, Bill," said the lawyer, as the two left the court house, "you did steal that horse, didn't you?"

"Well, now look here. I'll be honest with you. I always did think I stole that horse until I heard you make the speech to the jury. Now I'll be doggone if I ain't got my doubts about it."

#### Natural History

Teacher—"Rastus, what animal is most noted for its fur?"  
Rastus—"De skunk; de more fur you gits away from him de better it is fur you."
